The inventions are distinct, each from the other because of the following reasons:

6. Inventions I, II, III, IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the displaying of a hierarchy of nodes in a two-dimensional environment, invention II is directed to a displacement and an emulation of a user input device, invention III is directed to a method of transmitting requested data between client and server, invention IV is directed to a web page and a web browser, and invention V is directed to a user interface . See MPEP § 806.05(d).

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

9. Because these inventions are distinct for the reasons given above and the search required for Group I, II, III is not required for Group IV, V, restriction for examination purposes as indicated is proper.
